DETAILED ACTION

The rejections under U.S.C. 112, 102 and 103 on paper of 7/23/04 are maintained.

Response to Arguments

1. Applicant's arguments filed 1/25/05 have been fully considered but they are not persuasive. Applicant arguments do not cure the system deficiencies in terms of connection of elements defining the flow path, other than the filter provided in the flow path. There is not definition in the claims as to the fluid leaving the flow path is the concentrate, or whether a concentrate circuit is intended, or whether the permeate is passed to the second filter elements or flow path, therefore, the rejection under 112 are maintained. As to claims rejected under 102, applicant argues that in claim 19, reference 'EP '850 fails to disclose parallel flow manifold. Figures 2-3 of the reference teach parallel arrangement of the filters of "flow path" containing the filters. The manifolds for recirculating the fluid, e.g. concentrate is also disclosed (element 15, and valves are provided in the feed manifold for alternatively passing the fluid to a first or second flow path (or filters). Therefore, the rejection is also maintained.

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
